

Policy on sustainable development

Sustainable development takes our company forward. In acting proactively our aim is to path the way for the future development of our industry and show that profits and principles can go hand in hand. We believe that by contributing significantly to an ecological form of development in the relocation solutions business, we also ensure our long-term commercial success.

We search for the best possible protection of the environment in all our actions.

This requires state-of-the-art equipment. When we source products and services, we shall systematically weigh up the environmental aspects as equally important as practical and economic aspects.

Through regular education of our stakeholders we are aiming for ecological behaviour in their professional as well as their private environment. We want to set goals and benchmark the achievement with best-in-class corporations worldwide.

Our efforts can be categorized as follows:

- Improve Corporate Eco-Balance
- Carbon offset on unavoidable transport activity
- Awareness raising on stakeholder activities

The environmental process:
