## Ecology management system

## Ecology management system

### **Packimpex's commitment to protecting the environment lays on 2 pillars:**

- a) Reduction of carbon emissions
- b) compensation of the remaining carbon emissions

#### **a) Reduction of the carbon emissions**

This programme includes the following elements:

In our day to day operations, we commit to

- use public transport whenever possible
- systematically replace vehicles older than 8 years even if they are still running
- recycle all recyclable materials systematically and in every location. These items include packing material, paper, aluminum, glass, batteries, nespresso capsules, metals, IT waste, lamps and other electronic devices
- switch off all electronic devices that are not in use for the upcoming 3 hours
- not waste water

#### **b) Compensation of carbon emissions**

This programme includes the following elements:

- only buy hydraulic (CO2 neutral) electricity
- buy compensation certificates for the remaining carbon footprint generated in Switzerland
- offer the customers systematically with every quote to offset the carbon emissions generated abroad with the purchase of certificates
- offer to corporations systematically in every account review to offset the carbon emissions generated by the transferee of their company by the purchase of certificates
